Deliver Hybrid Cloud Your Way

Nutanix Cloud Platform Overview

NUTANIX CLOUD PLATFORM ADVANTAGES

Seamless App Mobility

- Same infrastructure platform for both on-premises and cloud
- Easily extend or burst your workloads as needed
- No retooling or rework

One Skillset. On-premises and cloud

- Same operational practice. No reskilling needed
- Unified management experience and console across environments

No Vendor Lock-in

- Software portability
- License portability
- Your choice of on-premises, public, or hybrid cloud

A HYBRID CLOUD PLATFORM DESIGNED FOR ANY APP, ON-PREMISES OR IN THE CLOUD

Public cloud is rapidly becoming the destination for many companies to quickly innovate and provide operational shelter through economic disruptions. However, for many companies, public cloud is not the only destination.

- 86% of cloud adopters view hybrid as the ideal model.[1]
- 54% of IT workloads will likely remain on-premises through 2022.[2]

Compliance mandates and business-critical application demands require an agile and scalable cloud infrastructure to ensure maximum security and performance. Nutanix gives you the flexibility to pick the right cloud deployment model for your workload and adjust seamlessly as your business grows. Eliminate large upfront capital expenditures of application refactoring, staff reskilling, and vendor lock-in. Nutanix is purposefully designed for hybrid cloud models to enable maximum scalability, availability and choice.

ONE PLATFORM FOR HYBRID CLOUD APPS & DATA

| Enterprise Apps | Cloud Native Apps | Analytics/ML | Databases | Dev & Test | IoT Edge | ROBO | EUC |

NUTANIX™ Cloud Platform

| DRaaS | Unified Storage | DRaaS | EUC/DaaS |

Hybrid Cloud Infrastructure

| DR | Security | Cloud Native |

HCI Storage | Compute | Virtual Networks

Hybrid Cloud Management

Operations & App Automation

Hybrid Cloud Ops | Infra as a Service

| On-Premises Datacenters | ROBO/EDGE | Public Cloud |

ONE PLATFORM. ANY APP.

Gain the flexible and highly scalable foundation you need to enhance your existing applications with Nutanix HCI on-premises or Nutanix Clusters in the cloud.

Common use cases are as follows:

Analytics & Business Insights
Start small and easily scale your big data analytics projects while maintaining performance, security, and availability. Run Splunk SmartStore with 1-click object storage of unstructured data at any scale.

Business Apps
Reliably run the most demanding, business-critical applications like SAP, Oracle, Microsoft, or IBM in any environment, at any scale. Accelerate time-to-value and eliminate IT-supported maintenance.

Databases
Unlock the value of your data with intelligent database operations that scale with your business. Speed database provisioning by as much as 97%[5]. Enable the flexibility and operational simplicity of DBaaS for your organization without the restrictions of single-vendor solutions.

End User Computing (EUC) / Remote Work
Securely enable a widely distributed workforce with the tools they need to stay productive from any device, anywhere, at any time. Benefit from as much as 90% faster delivery. Shape the Future of Work for your entire organization with our VDI and DaaS solutions.

Edge Computing/ROBO
Meet the rapidly evolving demands of remote & branch offices, retail locations, regional offices, and other edge sites with a single, scalable platform for all workloads. Simplify operations to eliminate the need for specialized personnel at each site.

Cloud Native Apps
Create a cloud-model app development and management environment for scale-out applications. Simplify and automate provisioning, operations, and lifecycle management of Kubernetes to accelerate development cycles.

DevOps
Create an environment where development and operations bond on a seamless application development platform across cloud and on-prem resources. Let developers use their choice of tools and APIs to rapidly develop, test, and monitor their deployment.

Business Continuity
Extend your DR into the cloud for always-prepared readiness, and faster time to recover
